Quiz-2

CLO-2 (Illustrate the concepts of Java Scripting for mobile applications)

Question 1:

Write a function that takes an array input and returns an array with square of all the elements in input array.

Example: Input [2, 3, 4, 5]

Output [4, 9, 16, 25]

Question 2:

Create a component that calls the above function on a button click and display the output as a text component.
